Response to Amendment

1. Applicant's amendment and arguments of October 10, 2006 are acknowledged and have been entered.
2. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. Claims 1, 2, 4-6, and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Volz in view of Canaday et al.

Volz discloses a reticulated polyurethane foam which is to be installed in a fuel tank to suppress an explosion in the tank, the foam comprising a volume electrical resistivity of less than $10E12$ ohm-cm at 70 degrees F. Volz also discloses using ammonium salt to form the foam as recited in claim 12. Volz does not disclose a density less than 1.0 pounds per cubic feet, however, the patent to Canaday et al. teaches a polyurethane foam which suppresses an explosion in which the foam has a density between 0.6 to 0.9 pounds per cubic feet (column 9, lines 10-11 and 34) as recited in claim 2. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Volz by providing the foam with a density of less than 1.0 pounds per cubic feet as taught by Canaday et al. since Canaday et al. teaches that such densities are known in forming polyurethane foams for suppressing an explosion. The device of Volz and Canaday et al. can be installed in a fuel tank and

thus carry out the method as recited. The amount of coverage as recited in claim 5 would have been a matter of design choice as would have been the amounts of the agents as recited in claim 14.
